

Passage of these two bills would help move Connecticut to a cleaner transportation future. My wife and I both drive plug-in hybrid vehicles so most of our local transportation is electric. Similar electric vehicles of all sizes would do much to reduce emissions, lower our dependence on fossil fuels, and save money. The CHEAPR program made our purchase of hybrids easier to afford, finance and use. More charging stations, electric school buses, cleaner-running heavy duty vehicles, smart traffic signals, and electric bicycles are all things that should be in our immediate future. Please give these bills a favorable vote.

Thank you,
Robert Andrews
